It is one of the three endemic species of iguanas that inhabit the Galapagos. In the spring of the Galapagos National Park rangers brought the tortoise to the Charles Darwin Research Station on Santa Cruz Island, for its protection, and for further studies.

Park authorities have known since of the existence of hybrids with Pinta Island.

It was lovely just to blend into the excited crowd to watch the show unfold. They ask Meryl how she copes with so many different accents.

The resulting tortoise looked a little too perfect, said Raxworthy. This beautiful and well-known turtle lays its eggs at the beaches of the Galapagos Islands, and will always return to the same nesting beach as part of their natural instinct. Finally, the taxidermy process began.
