Another consequence is that we can estimate the physical size of a lens package based on its focal length and aperture specifications. Another example of shooting through things is when a piece of dust lands on your camera sensor.

I find that the 35mm lens. We will assume that all lenses are circular. In this crop, most of the lights look smeared rather than perfectly round. You never know, if I live long enough, someday I might understand it all.

Taking some out-of-focus photos of a busy scene, each using a different aperture. aperture lenses are quite helpful in many situations, but those apertures are never perfectly sharp, and the extra depth of field difficulties are another problem.
