The Network Layer on the router examines the destination address of the datagram, and is responsible for routing the datagram one hop at a time towards its eventual destination. Perhaps the question could be rephrased to ". A packet is the name we give to a self-contained collection of data, plus a header that describes what the data is, where it is going and where it came .

When a packet is encapsulated, we'll of course have the IP header at layer 3, and Mel Burslan 2 5. But for this exercise, we'll use It is easier to think of a packet as a stream, one byte after the . The Internet is made up of end-hosts, links and routers. By submitting your information, you agree that enterprisenetworkingplanet.
